

Canadian Company Delegation – Battery Innovation Days 2026

AlumaPower – www.alumapower.com

Developing generators for zero-emission power that use recycled aluminum as fuel, with high energy density and long-duration performance for a number of applications.

CarbonLume – www.carbonlumetech.com

Patented light-driven methane conversion platform to produce highly conductive nanotubes engineered for battery electrodes as a sustainable alternative to carbon black and graphite.

Dryve Battery Materials – www.dryvematerials.com

Patented dry synthesis platform that enables the direct production of NMC, NCA, and LMR cathode materials, eliminating pCAM and conventional wet chemical processing.

Eberspaecher Vecture – www.eberspaecher-vecture.com

Design and manufacturing of Battery Management Systems (BMS) for portable, mobile, and stationary applications, tailored to the needs of customers and their markets.

GreenLIB – www.greenlib.com

Modular efficient process to convert battery black mass into refinery-ready materials – solving a barrier in recycling of contaminated inconsistent black mass.

Hybrid Power Solutions – www.hybridps.ca

Design and manufacturing of rugged, scalable battery energy storage and off-grid power solutions that deliver reliable, quite and emissions-free power with advanced remote monitoring.

Pulsenics – www.pulsenics.com

Design of battery diagnostics that extract critical electrochemical insights without destruction or disruption, keeping cells and stacks intact for further testing.

Transtech Innovations – www.transtechinnovations.com

Developing customized quality electronics for most systems in demanding vehicles, from battery management and power electronics to sensing, controls and embedded systems.
